**(54) COSMETIC****(57)Abstract:**

**PROBLEM TO BE SOLVED:** To obtain cosmetics which can stably be formulated with a fluorine-modified silicone resin difficult in stable formulation for conventional ones without precipitation.

**SOLUTION:** The cosmetics comprise (A) the fluorine-modified silicone resin containing a silanol group represented by average formula (I)  $R_1^nSiO(4-n)/2$  (1) ( $R_1$  is any functional group selected from the group consisting of a 1-8C hydrocarbon group, a phenyl group, a hydroxyl group, a 2-6C bifunctional alkylene group and a 1-8C perfluoroalkyl group with the proviso that the resin necessarily contains the hydroxyl group and a 1-8C perfluoroalkyl group as  $R_1$ ;  $n$  is an average number and is  $1.0 \leq n \leq 1.8$ ) and (B) an alkyl modified trisiloxane represented by structural formula (II) ( $R_3$  is a 1-22C straight-chain or branched alkyl group). The content of the compound (A) is 0.01-30% (mass percentage).
